

PicoSignals Release Notes

Version 4.0 (V4R0)

****Current Version:**** 0215d21

****Commits Since CTC Update Bug Fix:**** 53

****Release Date:**** June 1, 2026

New Features

- ****GUI Wrapper for OTA Updates**** – Added a graphical interface for the OTA updater tool
- ****Config Editor Tool**** – New GUI-based configuration editor with a clean interface
- ****PCA9554 I/O Chip Support**** – Extended support for multiple types of I/O expansion chips (PCA9554 & PCA9674), replacing obsolete hardware

Major Updates

****Bootloader Implementation**** – Complete bootloader system developed and tested, ready for field deployment

- Supports remote OTA firmware updates
- Multi-board address support for simultaneous updates across multiple boards
- Successfully tested and validated

****Configurable Logging**** – Added ability to toggle different groups of print statements for better debugging control

Bug Fixes & Improvements

- ****Input Handling Refactor**** – Restructured input system to use point structure with inheritance for cleaner I/O chip management
- ****Help Statement Cleanup**** – Fixed and cleaned up help command output
- ****Release Folder Organization**** – Moved release artifacts into separate version folders (V4R0 and earlier versions)

Affected Components

- Bootloader system (new)

- Configuration tools (new GUI)
- Input/I/O handling (PCA9554/9674 support)
- LED control and status management
- Radio communication (address support)
- Menu system
- OTA update infrastructure
- Build system
