

PicoSignals Release Notes

Version 4.0 (V4R0)

Current Version:	c6b514d
Commits Since CTC Update Bug Fix:	10
Release Date:	May 27, 2026

New Features

- **GUI Wrapper for OTA Updates** – Added a graphical interface for the OTA updater tool
- **Config Editor Tool** – New GUI-based configuration editor with a clean interface
- **PCA9554 I/O Chip Support** – Extended support for multiple types of I/O expansion chips (PCA9554 & PCA9674), replacing obsolete hardware

Major Updates

Bootloader Implementation – Complete bootloader system developed and tested, ready for field deployment

- » Supports remote OTA firmware updates
- » Multi-board address support for simultaneous updates across multiple boards
- » Successfully tested and validated

Configurable Logging – Added ability to toggle different groups of print statements for better debugging control

Bug Fixes & Improvements

- **Input Handling Refactor** – Restructured input system to use point structure with inheritance for cleaner I/O chip management
- **Help Statement Cleanup** – Fixed and cleaned up help command output
- **Release Folder Organization** – Moved release artifacts into separate version folders (V4R0 and earlier versions)

Affected Components

- Bootloader system (new)
- Configuration tools (new GUI)
- Input/I/O handling (PCA9554/9674 support)
- LED control and status management
- Radio communication (address support)
- Menu system
- OTA update infrastructure
- Build system

Commit History

- c6b514d – Log options
- 43b15a5 – GUI wrapper for OTA
- 9f4fe36 – Bug fixes and config editor
- 19b0633 – Added support for pca9554
- 74f69dd – Bootloader Tested
- 8d9237a – Added address for bootloader
- 00e0d19 – Bootloader
- 122c786 – Bootloader
- 9e81e50 – Moved Releases into separate folders
- bd841e9 – Rev bump
